**Lab assignment 1**

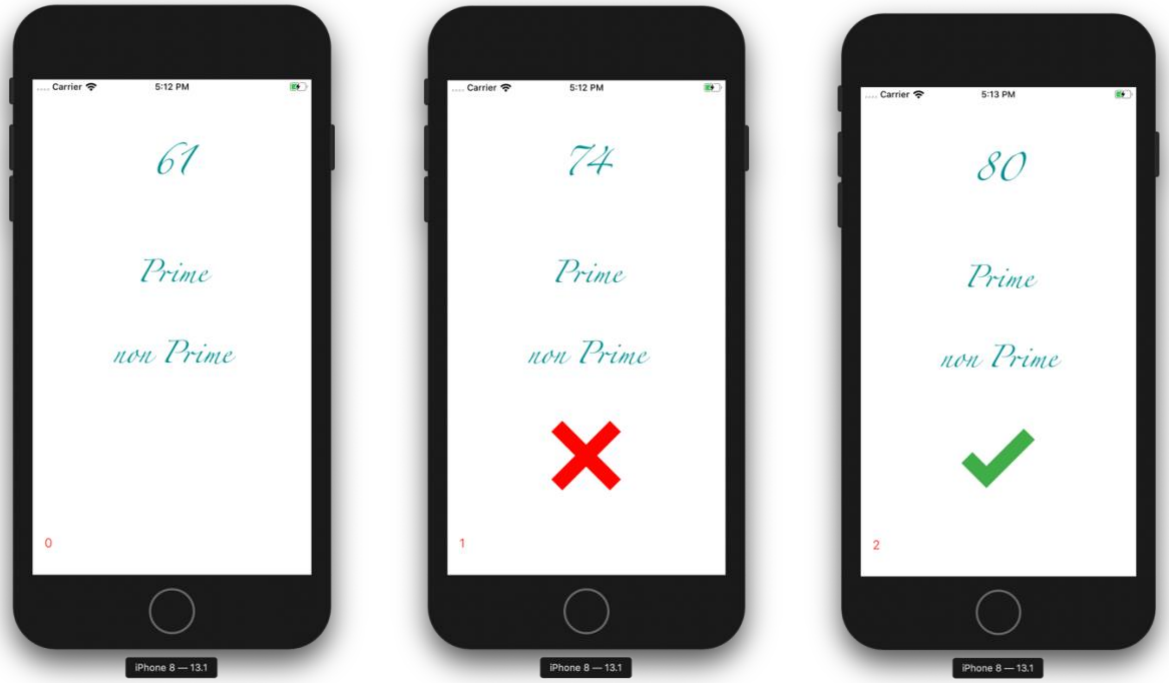
Description:

For this assignment you need to create a single screen application made in Swift UI.
your application should permit the user to choose if the number that appears on the screen is prime or not. Refer to the sample screenshots attached below.

Instructions:

The screen should have the following requirements:

- Numbers are appearing on the screen randomly
- The user can tap on “Prime” or “Not Prime” labels
- When the correct answer is selected, the green tick is displayed on the screen and the red cross for the wrong answer
- The correct and wrong answers must be recorded
- After each 10 attempts, a dialog should be displayed on the screen displaying the information of how many correct and wrong answers the user has selected
- There is a timer integrated with the application which update the screen with a new number every 5 seconds. If the user does not select within this 5 second, a wrong answer would be recorded for them.



**<u>Submission Instruction:</u>**
**<u>DUE DATE: Thursday Feb 22, 11:59 pm</u>**

- Your project name should be as follows:
  - *Lab1_yourFirstName_yourLastName*
  - You should have **minimum 20 commits** for your project.
- Provide your GitHub repository link in your submission.
- Your project repo must be private until due date and you need to make it public after.
- ZIP file of the project

**Grading Rubric**

---

**Marking Scheme:**
Marking of the assignment will be done according to the following scheme:

**Design [10%]:** This rubric focuses on overall design of the app which includes graphical user interface, images, polished look, and proper file organization used for the app.
**UI [10%]:** This rubric includes marks for user interface interaction component. The easier it is for the user to navigate the app the higher the mark is. This is somewhat subjective aspect of awarding a mark but for this assignment good design practices covered in class will be used.
**Specification [40%]:** This includes all the requirements specified above. Assignment will be considered for complete marks only if all the specifications are properly implemented. Partial implementation does not get awarded any marks.
**Dialog [20%]:** This rubric includes displaying the dialog with the correct information
**Timer [20%]:** This rubric focuses on implementing the timer logic

**NOTE:**

- **Projects that do not include a GitHub repository link will not be considered and will receive a zero.**
- **Submitting fewer commits than the required number will result in mark deductions.**
